9.1 Properties of Matter

4th Grade Science · Video: What's My Property? (Crash Course Kids #35.2) (Crash Course Kids)

Name: _____ Date: _____

Watch the video and fill in the blanks as you go.

A Science Secret

To find a gummy frog without looking, feel for candy that is small, _____, and frog-shaped.

We can use properties to tell about an _____.

Substances and Elements

A _____ is matter made of one kind of atom or molecule. It has specific properties.

Some substances are _____. They can't be broken down into other substances.

We can _____ substances and elements by their properties.

Properties of Metals and Gases

Metals are shiny. They have high _____.

Some metals, like iron, are attracted to a _____. (Not all metals are. Copper and aluminum are not.)

Metals are good _____ of heat and electricity.

Metals are often _____ or gray in color.

Gases have no definite size or _____.

The molecules in a gas spread out to _____ they are in.

Gases are usually _____. Light passes through them.

Carbon dioxide and _____ are two gases.

Solving a Mystery

A very important science rule: no _____, ever!

To tell sugar from sand, put each in water. Sugar _____ in water, but sand does not.

_____ is the ability to change shape.

Object A was hard and was attracted to the magnet. It was a _____.

Vocabulary

Word	Meaning
property	a trait that tells how matter looks, feels, or acts
substance	matter made of one kind of atom or molecule
element	a substance that can't be broken down into other substances
conductor	a material that lets heat or electricity move through it easily
malleability	the ability to change shape

Key Takeaways

• We can use properties like hardness, malleability, or _____ to identify unknown substances.

• Properties help us sort and identify matter, from candy to hardware.
