1.2 Natural Resources of Texas

4th Grade Social Studies · Video: Natural Resources of Texas (Smith Texas History)

Name: _____ Date: _____

Watch the video and fill in the blanks as you go.

Water Resources

Texas has many different landforms, so it has many different natural resources.

Our _____ resources are some of our most valuable ones.

Texas water resources include the Gulf of Mexico, rivers, lakes, _____, and bays.

The Gulf of Mexico, bays, and rivers give us _____ and shrimping.

We must make sure we are not _____ our waters, because we get a lot of our seafood from them.

Texas has three border rivers: the Rio Grande, the Red River, and the _____ River.

Lakes

Most Texas lakes were made when rivers were _____.

Texas has about 200 major lakes made from dammed rivers.

Caddo Lake is a natural lake that Texas shares with _____.

We use lakes for _____, which means watering crops and land.

Lakes also give us our _____.

Aquifers

An aquifer is an _____ water source.

A well is dug down into the ground to reach the water in an aquifer.

Two main aquifers in Texas are the _____ Aquifer and the Ogallala Aquifer.

Using water from the Gulf Coast Aquifer can make land near the coast _____, so that area uses lake water instead.

The Ogallala Aquifer is in a very _____ part of Texas that does not get much rain.

_____ refills the aquifer. Without rain, the water level drops.

_____ programs help save the water in the Ogallala Aquifer.

The Edwards Aquifer supplies water to the _____ area.

Land, Energy, and Minerals

Our _____ is a huge natural resource. We use it for farming and ranching.

The energy source most people think of first is the _____ and gas industry.

Texas also has coal, sand, and _____. Grand Saline, east of Dallas, is known for salt mining.

Granite, _____, and gypsum are found in Texas and used for building.

Vocabulary

Word	Meaning
natural resource	something from nature that people use, like water, soil, or oil
aquifer	an underground water source
irrigation	bringing water to crops and land
conservation	saving and protecting a resource so it does not run out

Key Takeaways

• Water, soil, oil and gas, and minerals are important Texas natural resources.

• Rainfall refills aquifers, so dry areas must conserve their water.

• Natural resources help the Texas economy grow.
